Association**

شركة الهيدان لأدوات ومعدات الأمن والسلامة
Al-Habdan Safety & Security Equipment Co.

Training Steps For Evacuation Plans:

For the protection of lives inside buildings, it is essential to set a simple chart for escape steps and how to deal with the elements of buildings including corridors, stairs and emergency exits.

- ◆ You should read the chart of your building in order to identify the places of doors leading to emergency stairs.

- ◆ Identify the location of the nearest alerting button (If there is any fire, break the glass of box to alert the residents of the building)

- ◆ Trace the exit signs leading to the place of emergency stairs.

- ◆ Assembly in a safe place outside the building and make sure that everyone is safely out.

- ◆ Every human has confusion feeling but with varying degrees so self-control during any accident is necessary. In order to achieve this goal, trainings on evacuation plans should be provided and repeated.
- ◆ Conduct practical trainings on the implementation of the plan and instruct kids in particular that hiding from a fire is not possible, so they have to escape quickly without seeking for others' assistance.
